Project proposal

YUTAO XU B00759205

I will choose the Book shop for my project. The reason why I chose this topic, is that it can be applied knowledge on this website. Besides, it satisfies the requirements of this project. This website will be designed like an official website for a book store. It will also provide chance for shopping books online. Overall, this website is like an e-shop for a hypostatic store.

For this website, there will be 4 pages. Firstly, my website will have a homepage. On the homepage, it carries a header, which shows the brand and name of the bookshop. Besides, it has a navigation bar, which can navigate to the about the entity page, the products page, and the contact page. It also provides a search bar to search books. Then a side bar will also be provided, because it can satisfy any devices. For my content on the home page, it will have different lists of books, like top 10 books, best sellers, most searched books etc. At last, there will be a footer on the bottom of the website. As for my products page, it provides a chance to make users search books in an advanced filter. It has a sidebar, which users can search books by details, like the author, the categories, and the publisher. As for the about the entity page, it provides some details of this website, like the destination and description. About the entity page is an essential page for a website. As for the contact page, it provides the contact information of the book store.
